

North Coast Transmission Line

The North Coast Transmission Line (NCTL) project, led by BC Hydro and supported by the B.C. government, involves constructing a new 450-km, 500kV line from Prince George to Terrace to provide clean energy for industrial development.

Key Project Details & Updates

- Purpose: The project aims to supply clean electricity to the mining and LNG sectors, supporting economic growth.
- Scope: It includes building new lines and upgrading existing 500-kV lines from Prince George to Terrace and 287-kV lines to Kitimat.
- Permitting: The project is subject to accelerated, streamlined permitting processes under the [*Renewable Energy Projects \(Streamlined Permitting\) Act*](#), with the BCER serving as the primary authority.
- Timeline: The project is part of a 2025-2026 initiative, with planning and approvals moving quickly.
- Partnerships: The project is being developed in partnership with First Nations.

Project Proponent: BC Hydro | [BC Hydro North Coast electrification and economic development webpage](#).

BC Hydro is proposing to build the new 500 kV transmission lines and associated infrastructure from Prince George to Terrace through two phases:

Phase 1: Prince George to Glenannan Transmission

- An approximately 170 km line from Williston to Glenannan substation.
- For more information, visit the [BC Hydro NCTL Phase 1 page](#).

Phase 2: Glenannan to Terrace Transmission

- An approximately 130 km line from Glenannan substation to Telkwa substation.
- An approximately 145 km line from Telkwa substation to Skeena substation.

- For more information, visit the [BC Hydro NCTL Phase 2 page](#).

Additional infrastructure for both phases includes fibre optic cable installed on new or existing transmission structures, capacitor station expansion, and substation upgrades or expansion.
